SUMMARY

SRE/DevOps Engineer with 2+ years of production experience at Elsevier managing AWS cloud infrastructure for 6-8 regulated healthcare platforms across APAC. Hands-on expertise in Terraform, CI/CD automation, observability, and incident response. Currently pursuing MSCS at UMass Amherst (Distributed Systems, OS). Seeking SRE/DevOps internship or full-time roles.

EXPERIENCE

Elsevier | Systems Engineer II - Cloud/DevOps

Aug 2024 - Jan 2026

- Standardized cloud infrastructure across dev, staging, and prod environments using Terraform, Terragrunt (Fulcrum pattern), Ansible, and Docker; reduced configuration drift across 3 environments and improved deployment reliability.
- Architected CI/CD pipelines with GitHub Actions and AWS SSM to automate build, deployment, and rolling instance refresh workflows, eliminating dedicated runner EC2 instances and cutting CI/CD overhead by ~40%.
- Integrated Cloudflare WAF and CDN for traffic filtering and content delivery optimization, improving application latency and perimeter security for regulated healthcare platforms.
- Established golden signal observability (latency, traffic, errors, saturation) using New Relic APM, centralized logging, and synthetic uptime checks, reducing mean time to detect (MTTD) incidents by ~30%.
- Resolved production Solr performance bottlenecks by isolating search workloads on a dedicated Linux instance, improving reliability during peak traffic.
- Led third-party risk compliance (DIRP, SRP, PRP) and coordinated secure production Go-live releases; developed reusable IaC modules standardizing provisioning patterns across 6+ applications.

Elsevier | Systems Engineer I - Cloud/DevOps

Aug 2023 - Aug 2024

- Managed AWS infrastructure (EC2, RDS, IAM, S3, CloudWatch, Lambda) for 6-8 healthcare platforms in APAC, maintaining high availability and fault tolerance across production workloads.
- Automated credential and key rotation using Python-based Lambda with API Gateway, EventBridge, CloudWatch, and SES, eliminating ~8 hrs/week of manual key management effort.
- Consolidated CI/CD runners across repositories and implemented rolling EC2 deployments via launch template updates, reducing redundant compute usage by ~25%.
- Managed RDS (MS SQL) deployments on Linux and Windows environments; handled schema updates, access control, and SSL certificate lifecycle management.
- Participated in on-call rotations and incident triage, contributing to 99.9%+ service uptime; authored deployment runbooks and architecture docs adopted by 3+ teams.

EDUCATION

University of Massachusetts, Amherst

Jan 2026 - Expected Dec 2027

M.S. Computer Science | Coursework: Distributed Systems, Operating Systems, System Defense, Machine Learning

Visvesvaraya Technological University, India

May 2019 - May 2023

B.E. Information Science and Engineering | GPA: 9.35/10.0 | Rank: 2nd | Academic Excellence Award

PROJECTS

- Kubernetes Auto-Scaling & Observability Platform** (*GKE, Prometheus, Grafana*) - Deployed containerized app with Horizontal Pod Autoscaler, Prometheus metrics, and Grafana dashboards demonstrating production-grade SRE practices. (In Progress)
- YouTube Transcript Summarizer** (*Python, T5, Chrome Extension*) - Built a Chrome extension using Transformer-based T5 model to generate multilingual video summaries from YouTube transcripts.
- Cook-Curry Recipe Platform** (*PostgreSQL, Angular*) - Full-stack recipe app with ingredient-based recommendation engine and cuisine-based filtering.

PUBLICATION

E-Voting System using Blockchain Technology and Homomorphic Encryption - IJRASET 2023. Proposed a secure, transparent voting system using Blockchain, AES with Homomorphic encryption, and cloud storage.

TECHNICAL SKILLS

Languages: Python, SQL, C/C++, Java

Cloud Platform: AWS (EC2, RDS, IAM, S3, CloudWatch, Lambda, API Gateway, EventBridge, SES, SSM)

DevOps & IaC: Terraform, Terragrunt, Docker, Ansible, GitHub Actions, CI/CD, Packer

Monitoring & SRE: New Relic APM, Cloudflare WAF/CDN, Golden Signal Monitoring, Observability, Incident Response

Systems: Linux/Unix, PowerShell

Databases & Web: PostgreSQL, MongoDB, MySQL, React.js, Node.js, REST APIs

Certifications: AWS Machine Learning (2021), IBM Data Science Specialization (2021)
